

HABIT LOOP MIRROR

Understand the patterns behind your digital habits.

Ramanarayanan T
Internship ID: IBMUEML007043

KPR Institute of Engineering and Technology, Coimbatore, Tamil Nadu

01 PROBLEM

- Screen-time reports show how much time users spend, but give limited understanding of why recurring usage patterns occur.
- Users may struggle to identify recurring digital habit patterns and their triggers.
- Users often lack personalized, meaningful alternatives to unplanned digital usage.

EXISTING ALTERNATIVES

- Smartphone Screen Time reports
- Digital Wellbeing dashboards
- Generic productivity and habit-tracking applications

04 SOLUTION

Detect → Explain → Reflect → Substitute → Improve

1 DETECT

Correlate app notifications with session starts; find recurring multi-day usage clusters.

2 EXPLAIN

Break each pattern into Trigger, Action, Latency and Duration impact in non-clinical language.

3 REFLECT

Categorize sessions as Planned, Necessary, Relaxation or Unplanned.

4 SUBSTITUTE

Personalized 2-, 10- and 20-minute alternatives based on onboarding preferences.

5 IMPROVE

Track verified habit evolution over weeks and calculate reclaimed time.

08 KEY METRICS

- Usage sessions analyzed
- Recurring habit loops detected
- Reflection activities completed
- Personalized swaps selected
- Alternative activities completed
- Reclaimed / intentional time tracked
- Multi-week habit evolution

03 UNIQUE VALUE PROPOSITION

Screen Time
tells you how
much.

We tell you
why.

Habit Loop Mirror transforms raw digital usage data into explainable behavioral insights and personalized alternatives that encourage more intentional digital habits.

DETECT → EXPLAIN → REFLECT
→ SUBSTITUTE → IMPROVE

09 UNFAIR ADVANTAGE

- Five-stage Behavioral Mirror Loop: Detect → Explain → Reflect → Substitute → Improve
- Evidence-based Python analytics combined with an AI layer
- Deterministic fallback that still provides insights when the AI API is unavailable
- Personalized alternatives based on user preferences
- Responsible, non-judgmental design focused on awareness and self-regulation, not medical diagnosis

05 CHANNELS

POTENTIAL CHANNELS

- Web application
- College and university programs
- Student communities
- Academic and internship demonstrations
- Digital well-being initiatives

02 CUSTOMER SEGMENTS

PRIMARY SEGMENTS

- College students
- Young adults
- Frequent digital-platform users
- People interested in improving digital self-awareness and self-regulation

EARLY ADOPTERS

- Students and young adults who frequently experience unplanned digital usage
- Users interested in productivity, self-awareness and healthier digital routines

07 COST STRUCTURE

- Cloud hosting and deployment
- AI API usage
- Data storage and processing
- Database infrastructure
- Software development and maintenance
- Domain and infrastructure costs

06 REVENUE STREAMS

POTENTIAL / FUTURE

- Freemium access
- Premium AI-powered insights
- Digital well-being programs for organizations
- Premium personalized analytics
- Institutional or educational subscriptions

Future business opportunities only. No current revenue is claimed.
